Hepatoprotective effects of systemic ER activation

ChIPseq/Epigenome genome - Annotation of Peak files and feature examination

Christian Sommerauer & Carlos Gallardo

25 August, 2022

Load the enhancers and promoters which were demarcated using various histone modifications. Then annotate these features and export them as tables. For promoters, only one peak per gene, the closest one, is permitted, multiple TSS are disregaded.

```
library("ChIPpeakAnno")
library("GenomicRanges")
options(connectionObserver = NULL) #That is a work-around, as the org.Mm. package cannot be loaded
library("org.Mm.eg.db")
library("biomaRt")
library("tidyverse")
